

Your Grid Better

Managing your grid balanced, efficient
and safe

Building and managing your grid for a better performance ?

We intervene at all levels of the electricity grid on continental networks and on microgrids

Keeping your growing grid reliable

Our significant experience, based on digitalized solutions is a guarantee for the reliability needed for the substations.

Enhancing energy efficiency for industrial plants

Well-sized Substations integrating our green transformer solution will help you to manage better your power supply.

Creating < zero net energy > areas

Decentralized production based on hybrid power plants provide proven solutions.

Designing et building smart grids

We install, integrate and manage renewable energies such as photovoltaic plants and wind farms with innovative storage and management solutions to provide Smart Grid and autonomous

Strengthening the high-voltage lines

Building, upgrading and maintaining High Voltage Transmission lines is one of our historical activity. Overseeing by drones help monitoring in real time networks with a large accuracy.

Your Benefits with Your Grid Better

Agility and reliability
for the building,
maintenance and monitoring
of traditional and innovative
grids worldwide

Move forward
with an innovative partner to
increase reliability and safety
and to decrease the
maintenance costs

Eco-friendly solutions
reliable, efficient and green
solutions for isolated sites,
industrial plants

of construction, maintenance
and surveillance of national
grids

transmission lines
installed

high-voltage
substations installation

3 of our accomplishments

SNCF

*Design and manufacturing
of digital control system in
high-voltage railways
substations.*

EDF Group

*Design, construction and
maintenance of high-
voltage lines, of high-
voltage substations from
63V to 400 kV and of
digital control systems*

SMART ZAE

*Smart Grid Innovation
platform including
renewable energies,
flywheels, batteries and
smart energy management
system*
